

# Qlite Quotation Website

<https://quotation.qrpixeldesign.com/>

## Core Overview

- A web-based product quotation and management system to generate the quotation.
- Features role-based access: Admins (full product management) and Users (browsing and quoting).
- Category based – Led Lights, Led Displays and Lighting Controls.

## Key Features & Capabilities

- **Quotation Generation:** Exports professional quotes directly to PDF and Excel formats.
- **Smart Cart System:** Treats identical products with different IP ratings/watt/beam angle as unique, independent cart entries.
- **Multiple IP Ratings:** Supports multiple IP variants (e.g., IP20, IP40) per single product.
- **Multi-Currency:** Supports multiple currencies with real-time exchange rates (updated every 24 hours).

## How It Works

- Admins manage the product database, pricing, and IP ratings via secured /admin dashboard.
- Users browse the catalogue, select specific IP ratings for products, and add them to a local client-side cart.
- The system automatically applies active exchange rates to calculate accurate local pricing.
- Users click export to instantly generate formatted PDF or Excel quotation documents containing all selected specs.

## Login & Access, Simple Explanation

### 1. New User Sign Up

- A new user goes to the "Register" page and fills in their details — Name, Email, Password, Mobile number, Company Name, Department, Country, City.
- As soon as the form is submitted, the account is created and active immediately.
- There's no extra approval or email verification needed — the user can log in right away.

### 2. Existing User Login

- Returning users simply enter their Email and Password to log in.
- The system automatically checks if the details are correct, and if they are, lets them straight in.

### 3. Admin vs Regular User

- Every new user is set as a "User" by default and they can only view products and create quotations.
- The "Admin" role is only assigned manually by the company's technical team/developer. No user can make themselves an admin.
- The system automatically recognizes whether someone is a regular user or an admin at login, and gives access accordingly.

### 4. What If Someone Forgets Their Password?

- Currently, there's no "Forgot Password" feature in the system.
- If someone forgets their password, only the technical team (with direct access to the system's database) can reset it — or the user will need to create a new account.

### 6. What Happens After Login

- **Admin** goes straight to the Admin Dashboard after logging in — where they can add, edit, or delete products and have full control.
- **Regular User** goes straight to the Products Catalogue page, where they can browse products, add them to a cart, and generate quotations (PDF/Excel). They can edit the details of LED Displays only.

**Status:** The system has been deployed and is live, but it is still in the testing phase. The team is actively working on improvements and refinements based on ongoing feedback.
